Place them here in **RED** font color so we can have a running list. I'd like to try and keep them in chronological order as much as possible and have a description of where they were found.

- 1) **BM-2cUYDhBNPTmrwTErf5DfqrnXPfQyCZwrM6** - the title of the main page on the Pi .mobi site
- 2) **BM-2cSwMJ7SaEji4qU8p1isEkVHuHCHhmZgwh** - name of the HTML file that contains an of 720x16 size under the painting image that sends you to the URL of the countdown timer
- 3) **BM-2cSp3oGoQjddTz1YgBiw3h59uNT3v1Hg33** - The name of "The Piano Lesson" painting which is also <!--commented out--> underneath the text on the page in the HTML

need to work on getting valid BM's off of the HEX/base64 "LesTroisMages.png" image

Side: **BM-2cUYDhBNPTmrwTErf5DfqrnXPfQyCZwrM5** - invalid when put into the Bit Message address field

Bottom: **BM-2cSwMJ7SaEjj4qU8p1jsEKVHuHCHhmZgwh** - invalid when put into the Bit Message address field

there are some, what look like greek characters in the address string. Wonder if we need to do some exegesis or use them to cipher out the correct letters/numbers?

I'll Isolate these BM addresses from the image to start working on correct characters to give a valid address.

SIDE:

Should put the BM's we found anyways into there so people can try to decode them.

Done - they are invalid, so some of the characters are obviously not correct.
